

Scheduled synchronization with SAP®

CSI Integrate & Collaborate (CSI IC) enriches
CSI Authorization Auditor C/S and/or CSI Role Build & Manage C/S.

CSI IC features:

- Web based front-end access
- Automation of downloading, audit cycles, security tests
- Integration of mobile devices like iPads in approval flows for user requests
- Schedule synchronization with one SAP landscape
- Process integration with ticketing systems, SAP workflow IdM systems

The automation part of CSI IC is a pure timesaver to ensure the data used for audits is actual / in sync with the SAP system. CSI IC updates instantly and synchronizes the (pre-simulated) user-role assignments in the SAP system using RFC functionality.

Value proposition of CSI IC

Efficient (ROI)

- Automation of security process
- Run automated tasks at out-of-office hours

Effective (Best practice - Security Improvement)

- Integration with own or third party management tools
- Web based front end for smooth access to the application

Tuned for Business Readiness

- Approvals can be managed directly with an iPad
- Email integration
- Wide appliances with XML format
