

CSI tools announces new SaaS solution for Access Governance and Privacy regulations for SAP environments

Vienna, June 22 2016 - CSI tools, a leading provider for SAP Access Governance and Privacy solutions, announced at the annual SAPinsider GRC2016 Europe conference in Vienna their new SaaS solution for Access Governance and Privacy regulations for SAP environments.

The European Commissions' regulation for data protection rules (GDPR - General Data Protection Regulation) in the EU shall apply from 25 May 2018. The objective of this new set of rules is to give control back to citizens over their personal data and to simplify the regulatory environments for business in the EU.

CSI tools' SaaS solution can fully automate the Get Compliant phase. With automatic analysis and reporting you can quickly identify the gaps and take the necessary actions to get GDRP compliant.

"Besides our on-premises solutions for SAP access governance and GDRP we have proven that our SaaS solutions help companies getting compliant in a fast and efficient way. Using CSI tools' solutions with pre-configured rule set makes it possible to give insight in the risks, but also in the steps to take to remediate these risks." Johan Hermans, CEO of CSI tools.

About CSI tools

CSI tools has been on the market with their solutions for SAP access governance since 1997 and provides analytic solutions that audit and monitor SAP environments, manage and validate authorizations, and build roles tuned to the organizations security requirements and business needs. CSI tool's has been recognized by Gartner by Gartners' Market Guide for SOD Controls Monitoring Tools and CSI tools' 2014 GRC solution suite has won multiple awards and was honored by analysts. CSI tools' solutions can be acquired on-premise and as SaaS. To learn more about CSI tools' solutions visit www.csi-tools.com.
