

CSI Integrate & Collaborate

Scheduled synchronization with your SAP landscape

CSI Integrate & Collaborate enriches CSI tools' Client/Server applications by enabling features such as web-based front-end access, automation of downloading data from SAP, integration of mobile devices in approval flows during user requests, and scheduled synchronization with one SAP landscape.

In short, CSI IC enables:

- Web-based, front-end access.
- Automation of downloading data from SAP, audit cycles, security tests, etc.
- Integration of mobile devices, like iPads, in approval flows for user access/role requests.
- Scheduled synchronization with one SAP landscape.
- Process integration with ticketing systems, SAP workflow, Identity Management systems, etc.

The automation possibilities of CSI IC are a pure timesaver to ensure that data used for audits is actual and in sync with the SAP system.

CSI Integrate & Collaborate instantly updates and synchronizes the (pre-simulated) user-role assignments in the SAP system by using RFC.

Value proposition of CSI Integrate & Collaborate

Efficient:

- Automation of security processes, also during Out-of-Office hours.

Effective:

- Integration with own or third-party management tools.
- Web-based front-end for easy access to the application.

Tuned for Business Readiness:

- Approvals can be managed directly from an iPad.
- Email integration.
- Wide appliances with XML format.
